

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

## CONTENTS

<i>Surface Tension in Relation to Cellular Processes</i> : PROFESSOR A. B. MACALLUM .....	449
<i>Meteorology at the Sheffield Meeting of the British Association</i> : DR. FRANK H. BIGELOW .....	458
<i>The Tenth Annual New England Intercollegiate Geological Excursion</i> : PROFESSOR HERDMAN F. CLELAND .....	460
<i>The Illuminating Engineering Society</i> .....	461
<i>Scientific Notes and News</i> .....	462
<i>University and Educational News</i> .....	464
<i>Discussion and Correspondence</i> :—	
<i>A Comparison of Methods for estimating Fame</i> : C. A. BROWNE .....	464
<i>Scientific Books</i> :—	
<i>Thayer's Concealing-colors in the Animal Kingdom</i> : LOUIS AGASSIZ FUERTES. <i>Pro-wazek's Einführung in die Physiologie der Einzelligen</i> : PROFESSOR S. O. MAST .....	466
<i>Scientific Journals and Articles</i> .....	469
<i>Special Articles</i> :—	
<i>Further Data on the Homing Sense of Noddy and Sooty Terns</i> : PROFESSOR JOHN B. WATSON. <i>A New Awnless Barley</i> : H. B. DERR .....	470
<i>The San Francisco Meeting of the American Chemical Society</i> : PROFESSOR CHARLES L. PARSONS .....	474
<i>Societies and Academies</i> :—	
<i>The American Mathematical Society</i> : PROFESSOR F. N. COLE .....	488

## SURFACE TENSION IN RELATION TO CELLULAR PROCESSES<sup>1</sup>

THE record of investigation of the phenomena of the life of animal and vegetable cells for the last eighty years constitutes a body of knowledge which is of imposing magnitude and of surpassing interest to all who are concerned in the studies that bear on the organic world. The results won during that period will always constitute, as they do now, a worthy memorial of the intense enthusiasm of the scientific spirit which has been a distinguishing feature of the last six decades of the nineteenth century. We are to-day, in consequence of that activity, at a point of view the attainment of which could not have been predicted half a century ago.

This body of knowledge, this lore which we call cytology, is still with all this achievement in one respect an undeveloped science. It is chiefly—nay, almost wholly—concerned with the structural or morphological side of the cell, while of the functional phenomena our knowledge is only of the most general kind, and the reason is not far to seek. What little we know of the physiological side of the cell—as, for example, of cellular secretion, absorption and nutrition—has only to a very limited extent been the outcome of observations directed to that end. It is in very great part the result of all the inferences and generalizations drawn from the data of morphological research. This knowledge is not the less valuable or the less certain because it has been so won, but simply

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

<sup>1</sup> Address to the Physiological Section of the British Association for the Advancement of Science, Sheffield, 1910.
